

# XLAM 4

**NEW**

## New fixing for polishing discs.

The XLAM 4 is an innovative product for fixing non-self adhesive polishing discs on metallographic polishing machines by contact.

The XLAM 4 is a thin disc to be fixed on the machine plate. Its special surface enables the adherence of XLAM series discs without self adhesive, so polishing supports are quickly and effortlessly interchangeable.

Polishing discs can easily be stored and reused.

The XLAM 4 enables easy transition between the different polishing steps and so reduces the time needed for sample preparation.

### Use

- The XLAM 4 fixes directly to the polishing machine plate with adhesive. In this case fixing is permanent.
- The XLAM 4 magnetic can be placed directly on the LAM PLAN FMS magnetic plate. In this case it is removable.
- The XLAM 4 can be stuck to a magnetic support, FAS2M, which makes it removable and enables alternation of the different fixing solutions, XLAM, SELF ADHESIVE and MAGNETIC.
- The XLAM 4 goes with the XLAM polishing series (non-self adhesive).

### Maintenance

To maintain the adhesive properties of your XLAM 4 support clean it with a little soap and water.

Replace the protection film after each use in order to maintain its adhesive properties.

Place an XLAM series disc on the XLAM 4 support.

Effortlessly remove the polishing disc.

### Replacement

Ensure that the XLAM 4 support is not deeply scratched and that it is always perfectly smooth and clean. Replace it if this is not the case.
