

DIABLOC

NEW

Lapping Plate Maintenance.

When lapping with composite plates such as NEW LAM® M'M', EVOLAM ULTIMATE and 2000 SERIES plates, it is important to recondition them often. Reconditioning ensures that the flatness of the plate is retained after several lapping operations.

DIABLOC is a reconditioning accessory developed to maintain the best lapping quality over the entire service life of a lapping plate.

Distortion correction

Using the DIABLOC corrects any distortion and surface faults in the plate that might result from heavy lapping operations.

Grooving action

The DIABLOC creates small grooves on the plate that ensures efficient lapping by optimizing the lapping friction.

Restoring efficiency

Using the DIABLOC removes any glazing (shiny appearance) from previous operations on the plate, therefore, restoring the lapping efficiency.

The DIABLOC system has two parts:

1. DIABLOC REFILL: A disc with a series of diamond pellets embedded on one side and adhesive coating on the other side.
2. DIABLOC SUPPORT: A thick plate to hold and load the DIABLOC REFILL flat while reconditioning.

A DIABLOC suitable for each type of plate.

MADE IN FRANCE

DIABLOC support and refill.

There are four variants designed with different degrees of aggressiveness:

- Black DIABLOC - super aggressive
- Purple DIABLOC - aggressive
- Blue DIABLOC - for finishing plate great diameter
- Green DIABLOC - for finishing plate

Depending on the plate to be reconditioned, the right DIABLOC can be chosen (see table below).

Mains plate Ø	EVOLAM		NEW LAM M'M'			
	Ultimate	Blue	Blue	Green	Yellow	Yellow
381 mm (15")						
480 mm						
610 mm (24")						
700 mm						
914 mm (36")						
1000 mm						
1200 mm (48")						

Example of implementation.
